

Google Lighthouse Accessibility Explanations

Our project receives 100 accessibility score in both web and mobile testing environments for most of the pages. However, we do have some points off in the following two pages:

1. Cart Page:

The lighthouse report suggests we should give accessible names to +, -, and the trash bin icons. However, we believe the icons are very self-explanatory. Giving more accessible names to them will just worsen the UI design.

2. Category Filter Page:

Like the cart page, the lighthouse report suggests we give a more accessible name to the x icon. The icon allows users to unselect all selected conditions. We believe the icon works better than a more accessible name in this case as well.
